Preface	ix
<b>PART 1. THE FUNDAMENTALS</b>	<b>1</b>
Chapter 1. A Model of Rayleigh-Bénard Convection	3
1.1 Basic theory	3
1.2 Boussinesq equations	10
1.3 Model description	13
Chapter 2. Numerical Method	18
2.1 Vorticity-streamfunction formulation	18
2.2 Horizontal spectral decomposition	20
2.3 Vertical finite-difference method	22
2.4 Time integration scheme	23
2.5 Poisson solver	25
Chapter 3. Linear Stability Analysis	28
3.1 Linear equations	28
3.2 Linear code	30
3.3 Critical Rayleigh number	31
3.4 Analytic solutions	33
Chapter 4. Nonlinear Finite-Amplitude Dynamics	37
4.1 Modifications to the linear model	37
4.2 A Galerkin method	38
4.3 Nonlinear code	40
4.4 Nonlinear simulations	46
Chapter 5. Postprocessing	54
5.1 Computing and storing results	54
5.2 Displaying results	55
5.3 Analyzing results	57
Chapter 6. Internal Gravity Waves	62
6.1 Linear dispersion relation	62
6.2 Code modifications and simulations	66
6.3 Wave energy analysis	70

Chapter 7. Double-diffusive convection	73
7.1 Salt-fingering instability	74
7.2 Semiconvection instability	77
7.3 Oscillating instabilities	79
7.4 Staircase profiles	81
7.5 Double-diffusive nonlinear simulations	84
PART 2. ADDITIONAL NUMERICAL METHODS	89
Chapter 8. Time Integration Schemes	91
8.1 Fourth-order Runge-Kutta scheme	91
8.2 Semi-implicit scheme	93
8.3 Predictor-corrector schemes	95
8.4 Infinite Prandtl number: mantle convection	97
Chapter 9. Spatial Discretizations	101
9.1 Non-uniform grid	101
9.2 Coordinate mapping	103
9.3 Fully finite-difference	104
9.4 Fully spectral: Chebyshev-Fourier	108
9.5 Parallel processing	114
Chapter 10. Boundaries and Geometries	122
10.1 Absorbing top and bottom boundaries	122
10.2 Permeable periodic side boundaries	124
10.3 2D annulus geometry	129
10.4 Spectral-transform method	139
10.5 3D and 2.5D cartesian box geometry	141
10.6 3D and 2.5D spherical-shell geometry	144
PART 3. ADDITIONAL PHYSICS	175
Chapter 11. Magnetic Field	177
11.1 Magnetohydrodynamics	178
11.2 Magnetoconvection with a vertical background field	181
11.3 Linear analyses: magnetic	187
11.4 Nonlinear simulations: magnetic	190
11.5 Magnetoconvection with a horizontal background field	192
11.6 Magnetoconvection with an arbitrary background field	196
Chapter 12. Density Stratification	203
12.1 Anelastic approximation	204
12.2 Reference state: polytropes	218
12.3 Numerical method: anelastic	225
12.4 Linear analyses: anelastic	230
12.5 Nonlinear simulations: anelastic	233

CONTENTS	vii
Chapter 13. Rotation	241
13.1 Coriolis, centrifugal, Poincaré forces	241
13.2 2D rotating equatorial box	245
13.3 2D rotating equatorial annulus: differential rotation	253
13.4 2.5D rotating spherical shell: inertial oscillations	263
13.5 3D rotating spherical shell: dynamo benchmarks	274
13.6 3D rotating spherical shell: dynamo simulations	279
13.7 Concluding remarks	292
Appendix A. A tridiagonal matrix solver	300
Appendix B. Making computer-graphical movies	301
Appendix C. Legendre functions and the Gaussian quadrature	305
Appendix D. Parallel processing: OpenMP	308
Appendix E. Parallel processing: MPI	309
Index	325
